

elmeg CS400xt

The ISDN system telephone for tough demands

CS400xt

The gap between the elmeg CS290 model for standard workstations and the elmeg CS410 for professional phone workstations has just been closed by the new elmeg CS400xt ISDN system telephone. The elmeg CS400xt is equipped with 10 extra function keys with LED support that can, in addition to speed dialing, also be used as line/connection keys, for logging in/logging out teams, for day/night call mode changeover, or for other freely programmable functions. Like the elmeg CS410, the elmeg CS400xt is provided with a seven-line display and seven softkeys for menu navigation. Connection to Up0 ports can be easily made using an optional Up0-S0 converter. Unlike the top model however, the elmeg CS400xt does not come with a USB port or an audio-in/audio-out jack, nor does it support the optional Answering machine module - it can be used in emergency power situations however, with the NSP module, meaning you can continue to be reached during a power outage.

elmeg xt

- o seven-line illuminated display
- o seven softkeys for menu navigation

Philosophy

Optimally matched to the modular elmeg PABX systems, the elmeg CS400xt offers you a variety of convenient functions. Ideal for team functions, for Boss/Secretary, or as reception desk phones in hotels. Emergency calls can also be placed during power outages, for example, thanks to the emergency operation function.
